# AQUA-LIGHT™ & SPA BRITE®

POOL AND SPA LIGHTS

Nothing enhances a spa's beauty like attractive lighting. However, many spas don't have room for full size lights. That's why Spa Brite® & Aqua-Light™ are such shining stars. They provide spas with underwater lighting that's as functional as it is attractive.

The only difference between these two lights is their light bulbs. The Spa Brite features an incandescent bulb. The Aqua-Light comes with a quartz halogen bulb. This light is available in a wide range of wattage from 75 to 250, which is actually bright enough to light a pool if desired.

Both also feature a tempered glass lens which comes with a red and blue lens cover for a designer glow. In either case, you can count on Spa Brite and Aqua-Light to give your spa that special sparkle.

\*Plastic face rings are snap-on attachments over stainless steel face rings.

Spa Brite and Aqua-Lights provide spas with underwater lighting that's as functional as it is attractive.
