It's about time for America's favorite pool cleaner.

The Polaris 380 does the work so you can enjoy your

It's about time for the Polaris Vac-Sweep® 380. Designed with the most advanced technology, the Polaris 380 is the fastest, most powerful and most durable automatic pool cleaning system in the world. It frees you from the time-consuming routine of vacuuming the pool bottom, sweeping walls and hard-to-clean places, and cleaning the filter and pump basket. Plus, it enhances the effectiveness of your chemicals. Polaris 380 does all the hard work for you, leaving you with a sparkling clean pool—and plenty of free time to enjoy it!

The large opening on the bottom vacuums up heavier debris like large leaves and acorns without clogging.

Its powerful booster pump makes all the difference. The 380 runs off its own booster pump, and works independently from the rest of your pool system. This allows the 380 to always operate at 100% efficiency, no matter how dirty or clogged the rest of your system becomes. It's 20% more powerful than the Polaris 180 and 25% more powerful than the advanced Polaris 360. Polaris 380 hooks up to its own separate return line and is powered by the pressure of clean water returning to your pool, which helps distribute the

chemicals as it travels around the pool. Because it's not connected to the skimmer line, the skimmer stays free to clean the top six inches of your pool, where 75% of any pool's contaminants live.

The 380 saves you time, money and energy. The booster pump can be separately controlled by its own time clock, which reduces energy costs and wear and tear on the cleaner, since it only has to operate for a portion of the normal pool filtration cycle. In 3 hours or less, the 380 cleans the bottom and sides of any size or shape gunite, fiberglass or vinyl-lined in-ground pool, even under a pool cover. At the same time, a patented scrubber on the sweep hose removes algae, debris and chemical deposits. You save your own time and energy by not having to vacuum, sweep or scrub by hand.

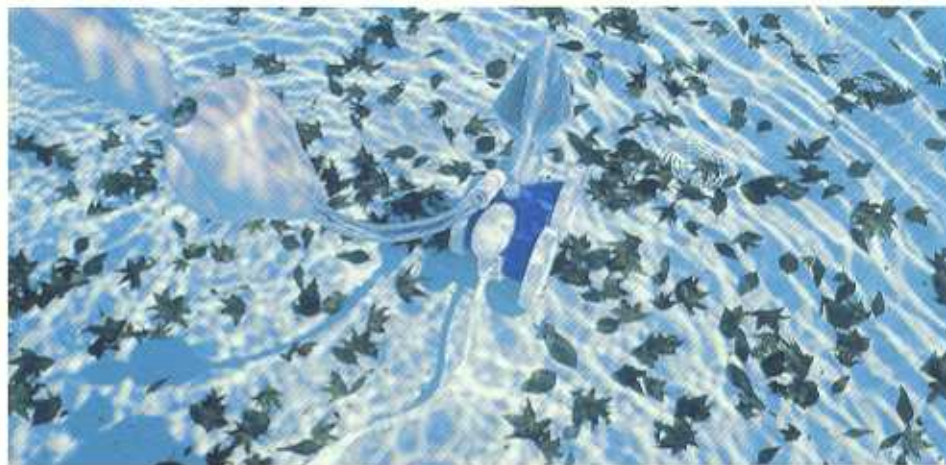

Polaris bags debris so it can't clog your filter. Most other pool cleaners collect

ur pool.

debris in the pump basket or filter, which reduces the cleaning and circulating capabilities of the filtration system. As that debris builds up, you're left with the messy chore of cleaning out the filter. Should you forget or postpone that unpleasant task, you increase your energy costs, strain your pool equipment and risk pump burnout.

Luckily, Polaris has a much smarter way. Polaris Vac-Sweeps collect pool debris in their own bags. The 380's larger filter bag is made of a fine mesh material, so your pool debris—even fine sand and silt—is filtered from your pool before it can clog the filter. A redesigned filter bag connection makes

Advanced technology makes the Polaris Vac-Sweep 380 the finest and most efficient pool cleaner available.

emptying the bag as quick as a flick of the wrist. And since most of the debris is captured by the bag, filter cleanings can be reduced by up to 80% a year. With a Polaris in your pool, your cleaning chores have been reduced to a matter of minutes per week.

Dirt and debris don't stand a chance against the powerful Polaris 380. The multiple jets on the 380 provide greater vacuum power and faster cleaning. Plus, we've enlarged the bottom opening so it can pick up larger objects. Not even heavy debris like acorns or pebbles can escape the amazingly efficient and powerful 380.

Depend upon Polaris for the long haul. For the past 14 years, Polaris has been America's best-selling pool cleaner. One reason for Polaris' popularity

is its durability, which is a tribute to our perfection-minded engineers. Many Polaris cleaners have been providing effective, trouble-free operation for more than 14 years.

In designing our top-of-the-line 380, our engineers made significant design improvements that make it as perfect as possible.
